THE GARDENER'S CALENDAR,

Containing useful Information for every Month in the Year.

JANUARY.—If the weather be open and dry, sow, upon warm compartments, small portions of peas, beans, cabbage, spinach, carrots, parsley, radish, lettuce, and onions, and preserve them from the cold by mats. Also, in hot-beds, cucumbers, melons, small salading, best early and red cabbage, kidney beans, and cauliflowers. Plant cabbages, horse radish, beans, and mint root. The cucumbers and melons this month require particular attention. They ought to receive air by small degrees as often as possible.

FEBRUARY.—Sow small salading, radishes, onions, parsley, spinach, lettuce, peas, beans, cabbage, cauliflowers, carrots, parsneps, fennel, &c. Plant cabbages, &c. as last month. The cucumber and melon plants, raised last month, should be transplanted about the middle of this into new hot-beds. The ground should be prepared for planting asparagus next month.

MARCH.—Sow, in this month, principal crops of carrots, early turnips, radishes, onions, cabbage, celery, cauliflowers, spinach, lettuce, asparagus, peas, and beans. Sow asparagus for the new plantations of the next year. Make new asparagus beds, and fork the old ones.

APRIL.—Sow and plant as in the former month, for a later crop. Towards the middle of the month dung should be prepared for ridges of melons and cucumbers. Snails and slugs ought to be killed, and weeds kept down; otherwise they will increase so fast as to render their destruction difficult.

MAY.—The principal crops sowed and planted in the spring will now require weeding, hoeing, and thinning, and some transplanting. The melon beds require an equal degree of heat; and the glasses must be covered every

night through the month with mats; but in the middle of the day they must be raised to the breadth of two or three fingers. Cucumbers in frames must receive a moderate supply of water, and be planted out under hand-glasses.

JUNE.—Particular attention is now required in weeding, hoeing, thinning, and watering the principal crops, and pricking out and transplanting for autumn and winter. Sow savoys, broccoli, borecole, cabbages, turnips, carrots, spinach, coleworts, kidney beans, lettuce, endive, celery, cucumbers, radishes, peas, beans, and small salading. Plant cabbages, colewort, savoys, broccoli, borecole, leeks, beans, lettuce, endive, celery, cucumbers, radishes, peas, and beans. Melon plants must be shaded in the heat of the day, and receive a large portion of fresh air. Transplant endive for blanching, and prick out young broccoli plants which were sown in April or May.

JULY.—Prepare ground for the reception of succession crops, and some main crops for autumn and winter, and sow turnips, &c. as at the beginning of the year. The common radishes sown now will be fit to draw the beginning of September; and the cauliflowers sown in May must be planted out in spots where they are to remain. The beds of carrots sown now will be fit to draw early in April. Spinach for winter may now be sown, and onions taken up if the leaves wither.

AUGUST.—Asparagus beds planted in March must now be cleared; celery transplanted and earthed, and the heads or suckers taken from the March artichokes. The early cabbage seed must not be sown later than the 12th of this month; but lettuce seed may be put in as late as the 24th. The cauliflower seed will not do without covering, and the spinach sown last month will require hoeing.

SEPTEMBER.—Sow spinach, lettuce, onions, radishes, cabbages, colewort, chervil, corn-salad, borage, coriander, turnips, and successions of small salading. Plant savoys, cabbages, coleworts, broccoli, borecole, lettuces, leeks, celery, endive, and perennial aromatic and pot herbs. Make mushroom-beds, and cut down the haum of asparagus, clean the beds, and dung them if necessary. Hoe your turnips, and weed onions. The cauliflowers of last month must be weeded out, and cabbage-plants pricked. Of the lettuces sown last month some may be put into warm borders for spring use, and others planted under frames for pulling in December and January. The different kinds of seed must be gathered as they ripen.

OCTOBER.—Sow a small crop of radishes and lettuces, successions of small salading, and a few early peas to come in next summer. Plant crops of cabbage, cauliflowers, late broccoli, celery, lettuce, early beans. Keep uncovered, night and day, for the greater part of this month, such cauliflowers as are planted in frames. All spare ground should be dunged and trenched.

NOVEMBER.—Most of the processes used last month will also be appropriate for this. Such as giving air to lettuce and cauliflower plants that are under frames. Cut down the leaves of artichokes, and earth-up the plants.

DECEMBER.—Forward the digging, manuring, or trenching vacant ground, preparing hot dung, making hot beds, and earthing and tying up plants. Sow a few early peas and radishes on warm borders, and small salading and cucumbers in hot beds. Plant early beans, strong cabbage-plants, and coleworts; and plant, in hot beds, cucumbers, mint, tarragon, and asparagus. The small salads may be sown every ten days, under frame; and such radish seed as may be put in the ground this month should be covered on cold nights with fern or long litter.
